

React JS Node Js Developer

Description

Position : ReactJS / **Node JS** Developer

Location : CHN / HYD / BGLR + NCR + Gurgaon + ANY location

LOOKING for Immediate JOINER within 30 days ONLY

Responsibilities

- Understand the different use cases for the Monitoring Domain across the different teams and help guide evaluation, building and adoption of a next generation Monitoring Platform for **e-com company** that is scalable, reliable and fault-tolerant. Help with evaluation using Proof of Concept on the different options/solutions selected that should solve for all the use cases.
- Collaborate with other engineers on code reviews, internal infrastructure improvements and process enhancements.
- Ensure minimal operational overhead by automating maintenance tasks with easily manageable configurations, solving scalability bottlenecks to improve performance and maximize system availability by ensuring functional and performance SLAs.
- Design, implement, and test complex, **multi-tier distributed software application frameworks** collaboratively with peers and technical leaders.
- Ability to find and help fix performance, scalability, and other live issues in a very time critical environment.
- Ability to work collaboratively with team members to achieve end vision.

Qualifications

- Expertise in working with **NodeJs, AngularJs, ReactJS, Javascript** and other front-end technologies.
- Hands-On experience in **Java, NodeJS, AngularJS, ReactJS, Javascript** and working knowledge with messaging platforms like **KAFKA**.
- Hands-on strong foundational knowledge of **OOP/OOD/Functional languages** along with understanding of **concurrency, parallelism, networking**, with profound **data structure & algorithms**, QL/NoSQL, Operating Systems, and Software Engineering
- Experience with **REST API, GIT, Docker, Jenkins, Maven**.
- Knowledge on **Spring Boot, Apache Storm and Kafka** is a plus.
- **Strong Java**, hands-on programming, Strong debugging and troubleshooting skills.
- Must have exposure to **Shell(UNIX)** or python scripting working knowledge.
- Strong applied experience. You have built, broken, and rebuilt software applications. Were **looking for creative thinkers who also know how to create real-world products**.
